WebDev CA 2

Proposal

Our group has decided that for our CA2 we should create a hitman site. We chose to do this because it offers an opportunity to create something truly unique and without any creative limits. It also provides many areas for customer interaction.

The purpose of our hitman site will be to offer a fake assassination service. The main function is exactly that to sell assassination packages and other fake sales. We hope that the intentionally egregious subject will make this more fun to work on.
